Database Entities (ER Diagram)

[x] Entities (Final for ER Diagram)

1) User
Attributes
id (PK)
name
email (unique)
password_hash
dob
age
gender

Relationships
User creates many Sessions
User has many Preferences
User creates many SongPlayLogs
User creates many MoodSessionLogs

2) Session
Attributes
id (PK)
user_id (FK -> User.id)
date_str
start_mood
target_mood
end_mood
intensity
duration
intensities_raw
is_live

Relationships
Session has many SongPlayed entries
Session has many MoodTransitions

3) SongPlayed
Attributes
id (PK)
session_id (FK -> Session.id)
title
artist

Database Entities (ER Diagram)

youtube_search_query
played_in_mood

Relationships
Belongs to Session

4) MoodTransition
Attributes
id (PK)
session_id (FK -> Session.id)
from_mood
to_mood
time_str
intensity

Relationships
Belongs to Session

5) Preference
Attributes
id (PK)
user_id (FK -> User.id)
title
artist
pref_type

Relationships
Belongs to User

6) SongPlayLog
Attributes
id (PK)
user_id (FK -> User.id)
mood
title
artist
action
logged_at

Relationships
Belongs to User

Database Entities (ER Diagram)

7) MoodSessionLog
Attributes
id (PK)
user_id (FK -> User.id)
session_date
start_mood
end_mood
start_intensity
end_intensity
songs_played_count
songs_skipped_count
liked_songs_count
mood_improved
session_duration_secs

Relationships
Belongs to User

[x] Relationships + Cardinality (For Diagram)

Relationship	Type
User -> Session	1 : M
User -> Preference	1 : M
User -> SongPlayLog	1 : M
User -> MoodSessionLog	1 : M
Session -> SongPlayed	1 : M
Session -> MoodTransition	1 : M

[x] ERD Drawing Structure (easy to draw)
User
-> Session -> SongPlayed
-> Session -> MoodTransition
-> Preference
-> SongPlayLog
-> MoodSessionLog
